

Press Release

GECKOLINE Sportswear GmbH continuously develops new products and systems designed to improve **health** and **performance**. Our clients benefit from our intensive interdisciplinary cooperation of specialists and scientists who participate in the offer range (B2B) of GECKOLINE.

We produce high quality sun protection textiles and functional clothing for sport and recreation. These products are improved continuously to meet always the highest standards. Additionally we inform the public about the medical aspects of sun radiation and allergic reactions. Target groups are kinder gardens, risk groups (especially professionals highly exposed to sun radiation), professional and non-professional sportsmen and people exposed to risks by recreational activities.

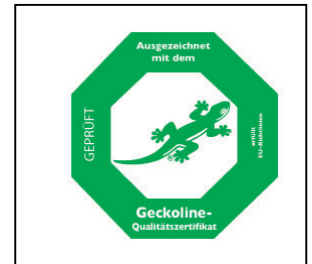

Our special focus is on children as the group most at risk by excessive sun exposure. We inform about the potential problems in relation to sun radiation, allergies and skin diseases (i.e. neurodermatitis). GECKOLINE products are recommended by leading medical organisations and ministries.

We are also backed in our activities by many world champions and VIPs. Our products are also present on TV, i.e. in the RTL-sitcom „**unter uns**“. Organisations like **WHO**, **BfS** (Federal German Authority for Radiation Protection) and **EUROSKIN** (an association of European physicians and ministries) as well as many physicians and university teachers are backing our campaigns. (See attached „GECKOLINE Information“)

GECKOLINE products are health protecting functional and meet highest international standards. They have been certified and patented and fulfil Öko-Tex Standard 100.

GECKOLINE Sportswear looks for solutions for solar protection within a scientific research project with our partner **RUNEX@123**, studying the use of nano technology for clothing. Scientifically proven results will be produced during a unique medical running project under the patronage of WHMF (World Humanitarian Marathon and Ultra-Marathon Foundation). Our products are already tested during the Badwater Ultra Marathon, the World's hardest marathon (217 km non-stop through the Death Valley), in California.

Our textiles are specially developed for professional sportsmen for extreme conditions. Products wearing the Geckoline seal are tested under extreme conditions and present definitely no health risks. They are recommended by independent medical professional organisations.

New with Geckoline:

1. Gecko Yamori Pads (Osmotic plaster based on Asian medical research)

- boosting energy and performance
- harmonising effect
- regulating metabolic processes of body's own capacities

uniquely efficient for

- metabolic disorders and functional limitations

2. Patented Safety - Neon Reflex Shirts, specially developed for extreme sports in summer.

These shirts provide – due to their patented design – solar protection and visual safety for people that work outdoors during summertime or are there for recreation.

This shirt protects during daytime
during sunshine
in the water
at night:

using highly visible neon colours (DIN EN 471, Klasse 2)
against solar radiation (EU Guideline 89/686EG)
against solar radiation (UPF 50 +)
using reflecting stripes (scotch 3M reflectors)

3. UV- Nano Running Shirt , Technologies of the 21st century

The innovative protection results from textile fibre sealed by nano technology. These textiles are water and dirt repellent and self-cleaning using the lotus effect, but still breathable.

- **minimizing odours** by micro-biologic fibre textures
- **prevention of infection** because of less transmission of pathogens
- **anti-microbiologic effects** (water and dirt repellent)

4. UV- Summer Horse Cover with Nano Sealing

Especially weak horses suffering of immune deficiencies may encounter problems during the change of coat. Furthermore these animals can develop skin diseases like fungus, allergies, eczema, rash, inflammations etc.

- solar protection, water and dirt repellent
- protection against eczema, no pathogens can survive
- protection against fungus and parasites
- breathable light UV summer cover with silver nano coating

5. Functional Diagnostics : Function & Form at highest level

About two thirds of our population suffer off problems of the chewing system, because of a wrong orientation of the jaws. The right position of the jaw joints and the normal function of the muscles have been lost and result in jaw pain, headaches, backaches, pain in the neck and Tinnitus.

After a check-up and analysis with DIR system, the causes of many specific health problems can be detected and in many cases an appropriate treatment can be found. Improvement for active sportsmen is also possible.

6. GECKOLINE Innovation Group „Health and Sports“

The Innovation Group is a cooperation of different companies focusing on innovative products and services for a healthy lifestyle. Therefore the group joins expertise in production, research and development in the medical field. Products and services are developed, improved and tested under extreme conditions and certified by renowned organisations.
